

SKIPWEIGHER™

High Accuracy Skip Weighing

On Board Vehicle &
Bin Weighing Systems

Know the weight of what you collect

The British engineered and built weighing system for skip trucks maximises payload & pinpoints profits.

SKIPWEIGHER™ is the first choice for skip trucks. Designed for high accuracy in rugged conditions, it allows operators to manage profits and reduces the risk of running light or being overloaded. Weighing skips on collection reduces damage to running gear, tyres and braking systems. SKIPWEIGHER™ can be retrofitted to new or existing trucks with minimal downtime and suits virtually any make of skip wagon. Wireless load cells replace the chain hangar bracket in the skip arms.

- Net, load and gross weights
- High accuracy +/- 10 kg or better
- Wireless load cells - 6 months battery life
- High capacity up to 18 tonne skips
- Installs to most skip waggons
- Underbody system Integrates to GPS/GPRS tracking system

Weigh and Display

Operators benefit from easy to use radio frequency hand-held displays, in-cab displays or both. Print in-cab receipts wirelessly. The wireless indicator gives drivers precise weight information with the convenience of taking weight readings up to 100 meters from the truck.

With competition and growing waste disposal costs, it's important to know exactly what you're collecting:

- Duty-of-care, operate within safety parameters
- Move optimum weights, reduce operating costs
- Lower repair & maintenance costs, improve fuel use
- Choose the best tip if paying by load or by weight
- Reduce the risk of fines, points & losing 'O' licenses

VWS can also supply Under Body load cells for skip and hook loaders

M350S in-cab indicator, radio, dash, panel mount or hand held

Weigh and Display

The M350S is an easy-to-read, lightweight in-cab indicator and has a host of features. It displays net, load and gross weights and is packed with standard features such as high security anti-tamper password operation & on-screen diagnostics. Also available weather-proofed to externally mount.

you weigh • you measure • you control

SKIPWEIGHER™ features rugged wireless technology and proven load cells with greater reliability and more accurate weighing than conventional systems. This means simpler installation, use and diagnostics, which add-up to lower service costs & increased uptime.

Wireless weight data transmission increases reliability as cables and connectors can get wet or damaged. This unique design is suitable for all makes of skip truck and for use with either fixed or telescopic arms. Load cells and bracketry replace the chain hanger bracket on the 'saddle' of the skip arms. This enables the arms to swing or extend without affecting the consistency of the results.

The compact weighing unit is easy and inexpensive to fit on new or retrofit installations. Because of connecting simplicity, VWS on board weighing products can be added to vehicles while they are within their service life, thus protecting your initial investment.

On-site service, calibrations & training

What gives us the edge is our flexibility. We aim to operate efficiently and productively to meet every type of customer need. Once you've taken delivery of your system we provide full on-site technical back-up so if you need assistance or training we're always available to help.

Professional on-site service keeps your onboard weigher working, our team of experienced onboard weighing engineers - the largest of any onboard weighing company in the UK - are trained and skilled to repair all makes quickly and efficiently. Help is only a phone call away, for service, repairs or calibrations call: 08458 625 526.

Service and calibration contracts

We offer service levels to suit all kinds of operations at very competitive and transparent pricing levels, please see our service brochure for more details.

Other VWS Products and Services that may be helpful

Under Body Vehicle Weighing

Full range of underbody weighing systems for multiple vehicle types

Bin Weighing

Domestic and commercial bin weighing with Trade Approved and RFID optional

Axle Weigh Bridges

Fixed and portable weigh bridges and weigh pads - WIM/Static

Skip Weighing

Crane and Skip weighing systems, wireless, accurate and easy to retrofit

Service & Repair

Nationwide Service and Repair from our own fully trained engineers

If you need advice to use your VWS weigher or help with calibration, give us a call our engineers give help, there and then. No problem.
